1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

McCalmont et al (US PUB. NO. 2004/0184584) discloses geographic routing of emergency service call center emergency calls

Rhodes et al (US PUB. NO. 2003/0186709) discloses public safety access point selection for E911 wireless callers in a GSM type system.

Muhonen (WO 03/065750) discloses a method and system for locating a mobile terminal.

2. Claims 1-20 are allowed.

3. The following is an examiner's statement of reasons for allowance: the present invention is a telephone emergency response system and method for connecting the emergency caller telephone device to the PSAP controller via a first communication link and connecting the PSAP controller to a gateway via a second communication link for delivering automatic location information (ALI) substantially at the same time to reduce time delay in delivering ALI data to the PSAP controller as in conventional systems. The independent claims 1, 10, 19 all recited the uniquely distinct feature of a gateway retrieving the needed first and second routing information from a database for establishing the required first and second communication links, and the gateway retrieves ALI data from the database which is transmitted via the second communication link to the PSAP controller such that the first and second communication links is
